#### (Your) Great Ideas for Networked Applications

#### Keith Winstein

Stanford CS344G https://web.stanford.edu/class/cs344g/ keithw@cs.stanford.edu

January 5, 2014

#### Today's Agenda

- 1. Introductions
- 2. Contents of the class
- 3. Coding demo
- 4. Pick papers to present
- 5. Meet teammates

# Introductions

#### My Interest in Networking

the Internet

the World-Wide Web

Skype

## Facetime

## Google Hangouts

#### Netflix

## YouTube

## Napster

#### BitTorrent

#### **Bitcoin**

Bolo

#### Doom

World of Warcraft

## Minecraft

### Google search

### NFS

## **AFS**

## Dropbox

Tor

Facebook

# Snapchat

Meteor

# Spark

Wi-Fi, LTE, SDN, BGP, MIMO, mesh-networking, full-duplex, medical devices, undersea, deep space...

#### This class

- 1. My goal: Help you realize a great project
- 2. Teams of 2–3
- 3. Two-page proposal by January 21
- 4. Present in last week of class
- 5. Writeup

#### Some ideas

- 1. Filesystem that stores everything in pings in flight
- 2. sshfs, but keeps connection across change of IP address or loss of connection
- 3. Editor/player for YouTube "multivideos"
- 4. ISP in the sky: share multiple connections
- 5. Connect to every node in the Bitcoin network and...

#### Also...

- 1. Reading group
- 2. Congestion-control "contest" (in February)
- 3. Office hours: Wed., 2:30-3:30 p.m., Gates 282
- 4. Questions on Piazza (if of general interest)
- 5. I am here to help you!

#### Paper captains

#### Team discussions
